ibrahimismailh@gmail.com

<https://ibrahimismail.dev>

Senior Full-Stack Engineer with 5+ years of experience specializing in high-performance frontend architectures, browser extension development, and robust backend API ecosystems. Proven track record of leading engineering teams and owning the complete SDLC for enterprise-grade security and authentication software. Expert at identifying system bottlenecks, resulting in concrete wins like an 8x build optimization and a 10x scalability increase. Deeply adaptable across modern tech stacks with extensive experience integrating advanced AI-driven workflows to accelerate product velocity. Available immediately.

TECHNICAL SKILLS

Frontend Architecture: React, Vue, Next.js, TypeScript, JavaScript, Micro-frontends, Browser Extensions (Manifest v2/v3), SASS/CSS, Tailwind, Responsive Mobile-First Design.

Backend & API Engineering: Node.js, Express.js, Java, Python, Flask, PHP, GraphQL, REST APIs, Webhooks, gRPC with Protocol Buffers (Protobuf).

Database Systems: PostgreSQL, MySQL, MongoDB, Database Migrations & Schema Design.

DevOps & CI/CD Pipelines: GitHub Actions, CircleCI, Docker, ArgoCD, Kargo, Cloudflare Registrar.

Specialized Security & Workflows: Zero Trust Architecture, Biometric Authentication, P2P Encryption (Symmetric/Asymmetric, Key Rotation), AI-Assisted Engineering (Cursor, Claude Code, GitHub Copilot, MCP Servers), Feature Flags (LaunchDarkly, Split), System Monitoring (DataDog, Sentry).

PROFESSIONAL EXPERIENCE

JumpCloud, Colorado, US (Remote) — Software Engineer

FEB 2022 - PRESENT (4+ years)

JumpCloud provides an enterprise cloud directory platform securing access, identity, and device management across global workforces.

Core Architecture & Team Leadership

- **Team & SDLC Ownership:** Led the JumpCloud Password Manager Browser Extension (PWMBE) team, taking full accountability for end-to-end delivery, architectural decisions, and cross-team execution.
- **Micro-frontend Strategy:** Architected complex UI structures within a micro-frontends framework for the core JumpCloud Admin Portal.
- **Dynamic UI Systems:** Engineered a dynamic rendering UI for custom admin roles, grouping permission scopes flexibly into categorized tables with logical selection dependencies. This eliminated the need for frontend code changes when adding new scopes.
- **Cross-Functional Technical Mentorship:** Actively participated in the technical hiring pipeline, interviewing engineering candidates, and built a structured onboarding process with continuous knowledge-transfer sessions.

System Optimization & Performance Engineering

- **8x Build Time Reduction:** Replaced a legacy Gulp build workflow with a modern Webpack configuration for the browser extension, slashing build compilation times by 8x (from 4 minutes to 30 seconds).
- **10x Scalability Boost:** Implemented client-side caching, lazy loading, and list virtualization to scale the extension's data capability, expanding smoothly from a 5,000-item ceiling to handling **50,000+ items** with

minimal footprints.

- **Memory & Sync Optimization:** Overhauled the low-level peer synchronization mechanism connecting the web extension to the desktop application, mitigating critical memory leaks and boosting performance.

Security, Authentication & Native Integrations

- **Manifest v3 Migration:** Led the critical migration of the primary web extension from Manifest v2 to v3, redesigning core workflows around background Service Workers to maintain high-efficiency operations.
- **Biometric & Passwordless Auth:** Developed the "JumpCloud Go" browser extension from scratch, enabling secure, cross-platform biometric authentication for seamless user logins.
- **Native & Low-Level Bridges:** Extended extension ecosystem capabilities by delivering Safari browser support, using a native Swift communication layer to interface securely with supporting desktop software.
- **Cryptographic Data Flows:** Implemented secure peer-to-peer data synchronization pipelines utilizing complex underlying encryption models (including asymmetric/symmetric encryption, key generation, and robust key rotation).

Modern Engineering Workflows & DevOps

- **AI Integration:** Embedded advanced AI tools (**Cursor, Claude Code, Gemini, Copilot, and custom MCP server integrations**) directly into regular development cycles, establishing massive gains in coding velocity and test writing.
- **Automated Release Pipelines:** Built and managed full CI/CD deployment automation (migrating from CircleCI to GitHub Actions) to compile, test, and automatically distribute production builds directly to major web stores.
- **Production Telemetry & Flags:** Managed production incident responses, rollbacks, and root-cause analyses using LaunchDarkly for real-time feature flagging and DataDog for centralized system logging.

MYKI, Beirut, Lebanon — Software Engineer

SEP 2021 - FEB 2022 (6 months)

A decentralized password management company serving global businesses and MSPs (Acquired by JumpCloud).

- Led the development efforts for the flagship password manager browser extension, shipping key updates, strengthening cross-browser stability, and refining automated credential autofill logic.

Neo Mena Technologies, Beirut, Lebanon — Software Engineer

DEC 2020 - SEP 2021 (9 months)

A premier FinTech corporation specializing in wealth management and modern digital investment applications.

- Translated structural UX drafts into highly performant, pixel-perfect, and fully responsive frontend views using React and SASS.
- Independently managed a standalone mini-project from scratch to production deployment, introducing full localization, dark mode, mobile-first design rules, and complete automated unit testing patterns.

EDUCATION

Master of Science in Computer Engineering LIU, Beirut, Lebanon

SEP 2019 - JUNE 2021

GPA: 3.85

Bachelor of Science in Computer Engineering LIU, Beirut, Lebanon

SEP 2016 - JUNE 2019

GPA: 4.0
